

## Plantes naturelles stabilisées

Voici la fin du cauchemar plantes vertes. La société Meamea commercialise des plantes ne nécessitant, ni eau, ni lumière, ni terre pour une durée de vie de dix ans en moyenne. Voici enfin des halls couverts de verdure et des spas pouvant faire la part belle à la végétation. Grâce au procédé de stabilisation des plantes les végétaux deviennent des objets de décoration. Ce procédé consistant à remplacer la sève contenue dans le végétal par de la glycérine. Il restait à les mettre en valeur, et c'est chose faite avec une large gamme originale de pots de formes diverses avec des plantes allant de 20 cm à 5 ou 6 mètres dans le cas du palmier - **meamea**

## Huber-SpineForce: The Back Machine enters the Spa

You all have heard of HUBER!  
Currently the Huber-SpineForce is known as The Back Machine. LPG has recently improved the osteo-neuro-muscular rehabilitation and mobilization high technology to precisely respond to the pain that affects some 80% of the population: back pain. New Spa treatment protocols and new methods that address each specific problem always focusing on the imbalance to "re-balance" the system... Already present in numerous spas, such as the Thermes Marins of Monte-Carlo and the Four Seasons Terre Blanche Spa, the Huber-SpineForce, with coaching by a physical therapist, integrates perfectly with weight loss spa treatments, global muscular strengthening, "specialty" back cures, as well as within young mothers' programs (gentle abdominal work) and for seniors... A veritable gym for the back, lightweight and safe to use, the Huber-SpineForce brings mobility and fine tunes motor skills within the spine while relieving tension - **LPG**

## Affusion shower with recycled water

The D'me by Stas Doyer is a new affusion shower that uses recycled water, enabling water consumption reduction of more than 50%. Particularly well thought out, the acrylic table provides comfort to the client as well as to the therapist due to the adjustable height function, regulated electrically to meet one's needs. The collection basin allows for water recycling and the gutters surrounding the table drain the water. The heat remains consistent due to an electronic regulator. - **Stas Doyer**

## Stabilized natural plants

Finally a solution to your houseplant problems. The Maema Company is selling houseplants that require no watering, no light, nor any soil and have an average lifespan of ten years. Through a plant stabilization process, the plant becomes a decorative object. This process constantly replaces the sap in the plant with glycerin. All that is left for you to do is to choose the plant and decorative pot, and with the large choice they offer in different forms and types, from 20 cm to 5 or 6 meters for palms, the choice is varied - **meamea**
